Forecast for Monday 21 Dec 2020

Weather: Rain will arrive early morning, becoming heavy at times. Rain will become lighter and fizzle out in the afternoon. A dry evening with clearing skies.

Chance of cloud free mountain/hill tops above 800m: 80% overnight becoming 10% early morning. Extensive cloud above 400m during the morning, slowly lifting to around 700 or 800m through the afternoon then clearing in the evening.

Visibility: Less than 100m on higher slopes in low cloud, especially through the morning. Rather hazy below the cloud base but becoming good during the afternoon.

Mountain Weather Forecast

Ground Conditions Supplement
Date: Sunday 20 December, Location: Helvellyn summit at 12:10, Temperature: minus 0.1C, Maximum wind speed 22.7mph, Wind chill: minus 7.8C, Average wind speed: 19.3mph.
Full report: Wintery conditions returned to the higher fells today with a mixture of sleet, snow, and graupel above roughly 700m. Although it was just a light dusting, the classic ridges (Striding and Swirral Edge) require a high level of care to negotiate safely. With all the recent rain, rivers are full making them difficult to cross and the ground is saturated making some of the paths and rocky areas very slippery. The freezing level tomorrow is forecast to fluctuate and eventually drop to around 700m. As a result, today's wet snow is likely to freeze and any further precipitation could fall as snow, especially later in the day. Anyone venturing into the higher fells should be prepared for wintery weather and potentially icy conditions on the tops. Full winter clothing including waterproofs, warm layers as well as hat & gloves, and equipment including mountain boots, headtorch, map and compass and the ability to use them in poor visibility are all essential. Carrying additional equipment including goggles, ice axe & crampons or microspike is also advisable.
